CONTENUTI

Oracle BigMachines Blue Belt Advanced BML introduces the Oracle BigMachines Markup Language (BML) and how system administrators can use it within the system. Admins that have already learned the point-and-click interface taught in Oracle BigMachines Yellow Belt will benefit from seeing how BML can be written to accomplish virtually any complex use case. Exercises throughout the course allow attendees to practice writing their own BML functions to meet advanced business requirements.

Students will learn how to write BML in accordance with its basic syntax, variables, data types and functions. Best practices stressed throughout the course focus on keeping code concise and organized to assist future administrators in making changes. At the end of the course, attendees will have all the tools they need to begin defining advanced BML functions on their own Oracle BigMachines sites.

Learn To:

- Apply BML in order to enhance Commerce functionally
- Create a Util Library function
