- Configuring Repository Cache Warming
- Purging Asset Versions
- Purging assets
- Safeguards and tips
- Creating a Preview Application
- Configuring a Preview Server
- Configuring Visual Merchandising Hot Spots
- Appendix A: Customizing Merchandising Code Examples

Description:

This Oracle Commerce: Customizing the Business Control Center Rel 11.1 training builds on what you learned in the Oracle Commerce: Platform Fundamentals for Developers 11.1 course. It teaches you how to integrate your custom repositories into Content Administration (CA) and the BCC, control the appearance of assets in Merchandising, and accomplish other technical tasks for a powerful and customized experience for your business users.

Learn To:

- Version the data managed by the merchandisers and content creators.
- Control the display of assets, properties, tabs, and navigation in Merchandising, including your custom repositories.
- Create programmatic imports.
- Control user access to menus and items in the BCC.
- Create custom UI templates.

Benefits to You

Ensure greater data integrity through controlled imports and fine-tuned user access. Optimize the business user experience by integrating your repository customizations into the Merchandising user interface for a compelling and easy business user experience. Improve performance by purging unnecessary data.

Create a Customized User Experience

You will learn how to edit the Merchandising user interface to integrate your custom repositories and organize custom properties in tabs in the asset editor for more efficient asset creation and editing. Through user access control, determine business user access by functional role, giving the access needed to the correct assets. Enhance the business user experience with custom promotion templates.

Handle External Data Feeds

Import data from files and feeds to create and update repository assets, controlling the workflow through programmatic

imports.
