- A Richiesta

PREREQUISITI

Back-to-Back Supply Creation and Fulfillment

Global Order Promising

Oracle SCM Cloud: Configurator Modeling

Oracle SCM Cloud: Order Management and Fulfillment Cloud Implementation

Audience

Cloud Administrator

Cloud User

Configuration Consultant

Configuration Implementer

End Users

Functional Implementer

Implementation Consultant

Technical Consultant

OBIETTIVI

Identify the differences between configured item processing and standard item processing within flows

Explain the configured item creation process and exception management

Manage processing and sourcing for ATO models

Define work definitions for ATO models, and explain how configured item work orders are created

Set up blanket purchase agreements for ATO models

Explain the additional information provided by Oracle Fusion Shipping when a configured item is ordered

CONTENUTI

Overview of Configured Item Creation and Order Fulfillment

Configured Items: Explained

Configured Item Fulfillment Flow

Data Path for Sourcing and Fulfilling Configured Items

Setup Overview

Configured Item Creation

Item definition and product configuration

ATO model, structure, and item number setup

Configured item creation

Configuration matching process

Dynamic structure generation for configured item

Configured item exceptions

Global Order Promising

Capability summary

Additional setups for configure-to-order (CTO) promising

Key functionality

Viewing CTO promising results on the Global Order Promising Check Availability page

Refreshing Global Order Promising data

Forecasting demand for ATO models

Planning supply to meet forecasts and orders

ATO Model Work Definitions

ATO model work definitions

Applicability rules

Manufacturing lead time for ATO model

Work definition report

Configured item work order

Procurement of Configured Items

Configured Item Procurement

Blanket Purchase Agreements

Configured Items in Downstream Flows

Impact of a configured item on Oracle Fusion Receiving, Inventory Management, and Shipping

Pick release and ship confirmation of configured items

Configured item details on shipping documents

Description:

The aim of this course is to explain the concepts of configure to order and the fulfillment flow of configured items. You will learn about the Global Order Promising and procurement of configured items. The course is focused on demonstrating the key differences in the fulfillment flow for configured items versus standard items and the understanding of Oracle Cloud configured item fulfillment process, and setup of the SCM Cloud products which are part

of this flow.

Learn To:

Explain the concepts of Configured Item Creation and Order Fulfillment .

Explain the concepts of Global Order Promising.

 Demonstrate how to configure items in the downstream flows.

Benefits to You

Ensure a smooth and successful implementation of your Supply Chain Management Cloud applications. Taking this course not only helps you better understand the core implementation tasks required to set up your applications, but also delves into the core functionality and how they can benefit your entire enterprise.

Instructional Approach

Each lesson in this course begins with your instructor presenting important concepts related to the functional setup or functionality of Oracle SCM Cloud.

Each lesson may also require you to do one or more of the following:

Complete a portion of the setup in the application.

Discuss key setup decisions and best practices.

Complete a knowledge assessment quiz.
