CONTENUTI

Overview of Product Development
Navigating Product Development
Working with Items

Configuring Item classes
Working with Manufacturer Parts
Managing Structures
Working with Change Orders
Redlining
Using Workflows
Adding users
Assigning roles to users
Relocating Descriptive Flexfields
Integrating with Innovation Management

Description:

This Oracle SCM Cloud: Product Development Implementation training teaches you how to use the application as an end user in order to understand how it should be configured for specific use cases. Expert Oracle University instructors will guide you through creating and configuring item classes with custom fields, creating change order types and configuring workflows.

Learn To:

- Create manufacturer parts and relate them to items in a structure.
- Use a change order to mark up changes to a product structure and submit the change order for approval.
- Configure the application by creating object types and workflow statuses.
- Add page attributes.
- Design and implement a change order type and workflow.
- Designate default approvers.
- Configure a connector between Product Management and Innovation Management.
- Add a Global Descriptive Flexfield to the manufacturer parts class.

Benefits to You

By taking this course, you'll develop a deeper understanding of how to use the basic application to benefit your business. By working with expert Oracle University instructors, you'll get a chance to participate in hands-on exercises that you can apply to your everyday job.
